AB - J08201994 Processing comprises processing the silver halide
photographic material by developer and/or fixing liq. contg. aminoacid
surfactant(s).

- USE - Used for processing silver halide photographic material.

- ADVANTAGE - The surfactant can be added to processing liq. for the
silver halide photographic material even if the liq. is thick by the
processing and processing unevenness is not caused even if
fingerprints etc. stick on the photographic material.

TI - Silver halide photographic material process avoiding unevenness - by
using developer and/or fixing liq. contg. aminoacid surfactant, for
addn. to thick processing liq. with smooth process.
